

In the Specification

Amend the last paragraph (lines 22-26) on page 7 of the substitute specification to read as follows:

As FIG. 2 shows, the curvature of the convex shape 14 in the direction of the head part 16 to be formed is greater (i.e., has ~~greater~~decreased radii of curvature) than in the direction of the base part 18 via which the stem part 17 is connected to the substrate 10. In this manner, each curvature has ~~increased~~decreased radii of curvature adjacent its inner end where the head part 16 is formed and ~~decreased~~increased radii of curvature adjacent an outer end where the connection of the stem 17 to the substrate 10 is formed. It has proven especially advantageous if, viewed from the lengthwise direction of the stem part 17 in the direction of the head part 16, the shape 14 is provided with its greater curvature beginning above the middle, preferably in the upper third (i.e., toward head part 16).
